

The figure displays a genomic track for the transcript ENST00000484181.5. The track shows the gene structure as a series of arrows pointing right, indicating the direction of transcription. The arrows are black with white outlines. There are 14 arrows in total, representing exons. The last exon is represented by a black rectangle at the end of the track.

The figure displays a genomic track for the transcript ENST00000251654.8. The track shows the gene structure as a series of exons (represented by black boxes) and introns (represented by gaps). Arrows above the line indicate the direction of transcription for each exon. The direction of transcription is generally from right to left, with a few exceptions where arrows point in the opposite direction.
